PROFESSIONAL SUMMARY

DevOps Engineer with hands-on ownership of CI/CD, container orchestration and Azure infrastructure for a subscription-based SaaS platform with per-client isolated environments. Builds Jenkins CI/CD pipelines that cut release time by about 85%, runs Kubernetes (AKS, K3s) and Docker microservice workloads, automates with Bash/Shell scripting, and codifies infrastructure with Terraform and Ansible. Experienced in Azure networking and security (VNet, NSG, Azure Firewall, DNS, SSL/TLS, RBAC), Azure MySQL Flexible Server and Azure OpenAI, with Prometheus and Grafana observability and a mean time to resolve production incidents of about 30 minutes.

CAREER HIGHLIGHTS

- **Release Automation:** Reduced build-and-deploy time by about 85%, from 30–40 minutes to 4–6 minutes, with Jenkins pipelines for every client environment.
- **SaaS Platform Operations:** Run per-client UAT and production environments across 8–9 Azure VMs in company and client subscriptions, with daily UAT and fortnightly production releases.
- **Azure AI Services:** Deployed and secured 3 Azure OpenAI models through Azure AI Foundry with key management, quota planning and network access restrictions.
- **Incident Response:** Resolve production incidents in about 30 minutes on average through structured log analysis, root-cause analysis and runbooks.
- **Intern to Full-time:** Earned conversion from DevOps Intern to full-time DevOps Engineer within 6 months based on performance.

TECHNICAL SKILLS

Cloud (Azure): Azure VMs, Azure DevOps, VNet, NSG, Azure Firewall, Azure DNS, Load Balancer, RBAC, Key Vault, AKS, ACR, Azure MySQL Flexible Server, Azure AI Foundry, Azure OpenAI
Other Cloud: AWS (EC2, S3, IAM, VPC)
CI/CD & DevSecOps: Jenkins (declarative pipelines, Jenkinsfile), Git, GitHub, YAML, Maven, Trivy, Checkov, SSL/TLS
Containers & Orchestration: Docker, Docker Compose, Kubernetes (kubeadm, AKS, K3s), Helm, Ingress, Microservices
Infrastructure as Code: Terraform, Ansible
Networking: TCP/IP, DNS, Load Balancing, VNet/Subnets, Firewalls, SSL/TLS
Observability: Prometheus, node-exporter, Grafana, alerting, journalctl, log analysis
Linux & Web Servers: Ubuntu, CentOS, Bash / Shell Scripting, Python, systemd, cron, SSH hardening, Nginx (reverse proxy), Apache Tomcat
AI & Productivity: Claude, ChatGPT

PROFESSIONAL EXPERIENCE

DevOps Engineer | Greentin Solutions Pvt. Ltd., Pune **Sep 2025 – Present**

- Designed Jenkins declarative pipelines (checkout branch, test, clean build, Docker image, deploy to Docker containers) for each client environment from Git, with credentials stored in Jenkins Credentials.
- Reduced release time from 30–40 minutes to 4–6 minutes by replacing manual build and deploy steps with Jenkinsfiles and Bash/Shell scripts.
- Execute daily UAT deployments and production releases every 15 days in Agile sprints, with pre-release checks, rollback plans and post-release verification.
- Engineer per-client isolated Azure environments across 8–9 Linux and Windows VMs: VNet and subnet segmentation, NSG rules, Azure Firewall policies, DNS A/CNAME records and RBAC access control.
- Expose client URLs securely through Nginx reverse proxy in front of Apache Tomcat, with SSL/TLS certificate installation and renewal.
- Operate Kubernetes workloads using Deployments, Services, Ingress, ConfigMaps and Secrets with readiness and liveness probes, resource limits, rolling updates and rollbacks; debug CrashLoopBackOff and ImagePullBackOff with kubectl describe, logs and events.
- Deploy and manage selected services on a lightweight K3s Kubernetes cluster using kubectl and YAML manifests.
- Containerise and deploy microservices with multi-stage Dockerfiles, version-tagged images in Docker Hub, Docker Compose stacks, bridge networks and persistent volumes.
- Deployed and secured 3 Azure OpenAI models through Azure AI Foundry, managing API keys, TPM quotas and network access restrictions for the product.

- Administer Azure Database for MySQL Flexible Server: VNet and firewall rules, users and privileges, automated backups and point-in-time restore.
- Built observability with Prometheus and node-exporter, Grafana dashboards and alert rules (email and Teams) for CPU, memory, disk and service health.
- Lead first response for production incidents using journalctl, container, Tomcat and Nginx logs, resolving issues in about 30 minutes and documenting RCA as runbooks.
- Harden Linux servers with SSH key-based access, least-privilege users and groups, regular patching, systemd services and cron-based maintenance jobs.

DevOps Intern | Greentin Solutions Pvt. Ltd., Pune **Mar 2025 – Aug 2025**

- Bootstrapped Kubernetes clusters with kubeadm on Linux VMs (control plane, worker nodes, CNI networking) and deployed applications using YAML manifests.
- Administered Ubuntu and CentOS servers: users and permissions, packages, systemd services, disk, memory and process monitoring.
- Automated backups, log rotation, disk and health checks with Bash scripts scheduled through cron.
- Installed and tuned Apache Tomcat and MySQL on Linux and deployed Java web applications (WAR) built with Maven.
- Containerised applications with Dockerfiles and Docker Compose, publishing versioned images to Docker Hub.
- Created Jenkins freestyle and pipeline jobs with GitHub webhooks for automated builds and deployments.
- Supported senior engineers in provisioning Azure VMs, networking and storage for UAT environments.

PROJECTS

CI/CD Pipeline on Azure Kubernetes Service GitHub

Jenkins, Docker, Trivy, Azure Container Registry, AKS, Helm, Prometheus, Grafana

- Designed an 8-stage Jenkins declarative pipeline triggered by GitHub webhooks, running unit tests, multi-stage Docker builds, Trivy scans, ACR pushes and Helm deployments to AKS.
- Secured Azure access with a service principal scoped to 1 resource group, and enabled AKS to pull from ACR through its kubelet identity without image pull secrets.
- Achieved zero-downtime releases with a Helm chart running 2 replicas, rolling updates, readiness and liveness probes, resource limits and one-command rollback.
- Implemented monitoring with kube-prometheus-stack, ServiceMonitor, Grafana PromQL dashboards and 2 alert rules for downtime and memory usage.

Secure Azure Infrastructure with Terraform & Ansible GitHub

Terraform, Azure (Load Balancer, VNet, NSG, MySQL Flexible Server, Key Vault, Managed Identity), Ansible, Jenkins, Checkov, TFLint

- Developed 5 reusable Terraform modules (network, load balancer, compute, database, Key Vault) with remote state, locking and versioning in Azure Storage.
- Designed a highly available web tier with 2 private VMs behind a Standard Load Balancer, app-aware health probes, explicit-deny NSGs and SSH limited to allow-listed IPs.
- Isolated MySQL with a delegated subnet and Private DNS, storing the generated DB password in Key Vault for VMs to read through their system-assigned identity.
- Automated configuration with 3 Ansible roles (OS hardening, Tomcat, Nginx) and a Jenkins pipeline running fmt, validate, TFLint, Checkov, plan, approval and apply.

EDUCATION

MBA – Information Technology **2024 – 2026**
Dr. D. Y. Patil Institute of Management and Research, Pune

Bachelor of Business Administration (BBA) **2021 – 2024**
Bharati Vidyapeeth's Abhijit Kadam Institute of Management and Social Sciences, Solapur
